Curtis Hallstrom

Dear Mr. Hallstrom,

[REDACTED] VP Business Development at Shell Shock Technologies, asked me to forward you 1,000 rounds of loaded L-Tech ammunition that features the new Shell Shock NAS<sup>3</sup> case.

My name is [REDACTED] and I am the owner of L-Tech Enterprises located in Eubank, KY. L-Tech is a specialty ammunition manufacturer and test facility for advanced ballistic products. L-Tech manufactures ammunition for the US Military including US special forces, law enforcement and, for the last three years, we have manufactured all of the Sig Sauer ammunition products.

We look forward to your feedback on these rounds and we'd be happy to provide you with additional technical information if required.

I would also like to comment on Shell Shock's NAS<sup>3</sup> cases. They are an engineering marvel. We found their performance to be superior to brass and nickel-plated brass at every level of testing. L-Tech started testing NAS<sup>3</sup> cases in January 2016 and we can categorically say that we have never seen anything like them.

They are 50% lighter than brass, capable of handling pressures well in excess of 65,000 psi and provide extremely consistent performance, round after round. We believe this consistency is due to the combination of the uniform wall thickness, a flat bottom in the cylinder and a unique flash hole design that provides for a more consistent and even powder burn rate.

The cases can be used for +P and +P+ loads without issue. We opted for a custom head stamp and completed extensive testing in over 30 different hand guns and fully-automatic weapons. The nickel alloyed into the NAS<sup>3</sup> cylinder provides a slicker surface than nickel-plated brass and the aluminum base will not abrade or clog ejector and firing mechanisms. More information about Shell Shock's NAS<sup>3</sup> cases can be found at [www.shellshocktech.com](http://www.shellshocktech.com).

Oh and one more thing, Shell Shock's cases are cheaper than conventional brass and a lot cheaper than nickel-plated brass. We believe they are the perfect match for the Full Stop™ bullet and allow L-Tech the opportunity to offer the market a completely new cartridge featuring the latest technology and superior performance.
